| Weight $(\mathrm{kg})$ | 340 | 530 | 845 |

AQ Box enclosures come in 3 different sizes with 2 different glazing and can be ordered all year long from stock. The parts are placed inside a wooden box together with the assembly manual that ensures easy DIY assembly. One truck can fit about 10-15 boxes at the time.

## TECHNICAL FEATURES

RAILS
The 20 mm tall rails that are secured to the ground ensure easy gliding of the segments as well as the steel wind hooks provide permanent wind and storm protection.

SEGMENT RUBBER
High quality silicone rubber provides great insulation between the segments. It only touches the segments when they are in closed position this way avoiding any kind of damages resulting from the segments' movements

## CHILD PROTECTION SEGMENT LOCKING

## WE INSTALL OUR AQ BOX ENCLOSURES WITH

 A STATE-OF-ART, VERY SAFE ORIENTING-LOCKING SYSTEM THAT INCLUDES A UNIQUE DESIGN KEY.This multi functional lock was designed and produced by Aquacomet therefore it is patented. The innovative solution provides positioning and securing on the rails as well as ensures child safe locking.

## GLAZING

Both types of AQ box enclosures' glazing panels, 6 mm double wall Polycarbonate or 3 mm SAN solid, are UV protected on both sides.

SEGMENT POSITIONING Aquacomet developed special arrest system is installed in the AO box enclosures that ensure child safe and easy locking of the segments when they are out of use.
