

Pegasus Products

Liners Designed to Fit Perfectly Every Time

For over four decades

Pegasus Products has been manufacturing the highest quality swimming pool liners available. We are a family run business that prides itself on quality manufacturing, products, and exceptional customer service. We carry an extensive line of patterns for both in-ground and above ground pools.

The proof is in the pudding, or in this case, the plastic. The material we use is made from virgin vinyl, flexible Poly-Vinyl Chloride (PVC) sheeting containing various additives, i.e. inhibitors for mildew, mold and algae. These additives improve the life and quality of the vinyl by increasing its resistance to chemical/ detergents, brittleness, punctures, high strength with durability and low temperature flexibility. Keeping our standards high has helped us create a loyal national customer base.

43

YEARS

20 or 27 mil

High quality virgin vinyl available in two durable thicknesses.

Some patterns are only available in one thickness

25 year

NO DIVING

No Diving

WE DO NOT RECOMMEND DIVING IN ANY SWIMMING POOL. Diving can result in serious, permanent injuries or death, even if the pool or liner is designed to meet APSP diving standards. Every liner has a safety packet containing four APSP publications, five "NO DIVING" labels and a liner care and warranty booklet. It is mandatory to affix the supplied "NO DIVING" labels to the liner as shown in the liner care and warranty booklet.

LowPro

This new manufacturing technique creates a low profile seam that is significantly less noticeable than a conventional sealed seam.

OLD SEAM

FLAT SEAM

Textured Steps

Our textured steps are manufactured with a 27mil PVC material to provide a non-slip step that is both durable and most importantly, safe. Choose from ten colors and patterns.

Our Production Facility

As a manufacturing company we have incorporated various methods in our production to help create a cleaner, greener future. We have been using Solar Energy for manufacturing since 2010! In addition, we recycle our production scraps and remnants. Our goal is to reduce the amount of waste that ends up in landfills and oceans by recycling.
