

Aquablanc

Aquablanc O₂ Gentle

Key Features/Characteristics

- 🔑 Dual sachet system
- 🔑 Gentler approach to pool care

Maintain pH levels within the ideal range of 7.0 – 7.4.

Application Instructions:

Before converting a pool to Aquablanc O₂ Gentle, shock dose with Blue Horizons Granular Shock, Rapid Shock or Shock 'n' Floc to a minimum of 5 mg/l but ideally 10mg/l free chlorine.

1. **Initial Dose:** Add two double sachets (2 x powder sachets & 2 liquid sachets) per 4,400 gallons (20m³) of pool water.
2. **Weekly Dose:** Add one double sachet (1 x powder sachet & 1 liquid sachet) per 4,400 gallons (20m³) of pool water.
3. Carefully apply the powder sachet first aiming for even distribution close to the pool water surface. Apply whilst the filter pump(s) are turned 'on' to aid distribution. **Warning:** When dosing this sachet, check wind direction first to ensure granules are not blown back towards you.
4. Pour the liquid sachet into the pool, whilst the pump(s) are turned 'on' preferably near the water inlets to aid distribution.
5. Test the oxygen level one hour after applying Aquablanc O₂ Gentle. The oxygen level should be between 5 – 8mg/l. If the oxygen figure is below this level, the weekly dose rate of O₂ Gentle may need to be increased. Alternatively it may be time to shock dose the swimming pool with Aquablanc Active Oxygen Liquid or a Blue Horizons chlorine shock product.

Usage Application						
 m ³ / gallons	20 m ³ (4,400)	30 m ³ (6,600)	40 m ³ (8,800)	50 m ³ (11,000)	60 m ³ (13,200)	70 m ³ (15,400)
Initial 1st day	2x A B	3x A B	4x A B	5x A B	6x A B	7x A B
regularly every...	7th day 1x A B	4th day 1x A B	7th day 2x A B	5th day 2x A B	7th day 3x A B	6th day 3x A B
